

SAVE THE DATE

CONFERENCE AT THURSDAY 19 NOVEMBER 2020

The expertise center for movement disorders and ZiuZ Visual Intelligence are pleased to announce:

‘The interface between movement disorders and technology’

The conference will be held in Leeuwarden. The topics address the intersection of medical and technical aspects of movement disorders. Different themes, such as wearables, brain networks, and gait analysis will be included in the program with reference to clinical syndromes such as tremor, Parkinson's disease and cerebral palsy. For each theme a medical and a technical keynote speaker will give a lecture and new insights on developments in industry will be addressed.

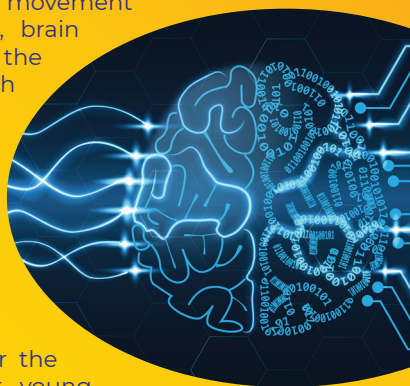

The program includes lectures by of prof. David Zee, prof. Andrea Kühn, prof. Bert Otten, prof. Jaap Harlaar, and prof. Marina de Koning-Tijssen.

We invite participants to send in an abstract for the poster session before 15 September 2020. For young researchers the best 5 abstracts will be granted free entrance.

More information about the program and registration will be announced on our [website](#).

The conference is endorsed by the Dutch association for Movement Disorders. Funding is given by the European Fund for Regional Development of the European Union and the province of Friesland.

Depending on the regulations with regard to the COVID-19 crisis, the date of the conference might be subject to change.
